

Jan Yperman Hospital

Wi-Fi-based RFID solutions at Jan Yperman are enabling increased patient throughput in the O.R. and day hospital, ensuring swift and productive use of expensive hospital equipment, quick searching for disoriented patients, and improved safety of hospital nursing staff.

Wi-Fi-based monitoring solutions help us track our workflows and optimize them. We can now objectively detect the time patients spend in each phase of our day surgery department and change the workflow if needed.

Eddy Delporte, Quality Coordinator, Jan Yperman
