

Oregon Health & Science University

OHSU, an AeroScout customer since 2006, discusses its use of Wi-Fi RTLS applications including Asset Tracking & Management and Temperature Monitoring. OSHU uses the AeroScout solutions to manage thousands of pieces of medical equipment, from pumps to beds, saving the academic medical center precious time and resources.

Based on staff functions surveyed and direct observations, including salaries and benefits of the organizations, it was estimated we were spending about \$1,729 per shift trying to locate equipment over our 26 nursing units. Annualized, that was about \$1.26M per year of waste and lost productivity – making payback on the purchase of the system less than one year for OHSU.

Dennis Minsent, Director, Clinical Technology Services, OHSU
