

## NewYork-Presbyterian Hospital

NewYork-Presbyterian Hospital discusses the importance of Wi-Fi RTLS to biomedical engineering and describes the hospital's use of AeroScout's Asset Management solution to track and manage over 8,000 assets across its 2,400 bed campus.

Improved visibility of our assets allows us to free up the time spent monitoring these assets, so our staff and technicians can do what they do best – provide high quality patient care. We chose AeroScout because they offer a solution that is scalable to handle many thousands of assets, and meet the needs of a wide variety of hospital users across our large, distributed environment.
