

SUNY Upstate Medical University Case Study

SUNY Upstate increases efficiency and reduces costs with AeroScout solutions, making every second and dollar count for patient care. SUNY Upstate is realizing significant benefits, such as:

- Facility expansion with no staff expansion in Clinical Engineering
- Avoiding as much as \$300,000 of planned additional expenditures on IV pumps
- Better throughput and improved patient safety in the O.R.

We were able to use the same network and access points – which we had already installed for data and voice – to enable the location, tracking and management of medical equipment.
